

26a

A FRUITING BRANCH OF THE WAMPI (*CLAUCENA LANSIUM* (LOUR.) SKEELS, S. P. I. No. 45328).

The wampi fruit is a great favorite with the Chinese, but is little known in America. It has a tart flavor a little like that of the gooseberry, but is closely allied to the citrus fruits and can be grafted on grape fruit and other citrus species. It would be desirable to give it a test as a stock for these fruits. (Photographed by Wilson Popenoe, Santa Barbara, Calif., October 30, 1914; P1624FS.)
